

This is the first block. It contains multiple lines of text that should be detected as a single block. The lines are closely spaced and left-aligned.

This second block is indented and separated by some vertical space. It should be detected as a separate block from the first one.

This third block has different alignment and should also be detected separately.

Fourth block with larger font size. Font size changes can affect block detection.

Final block uses bold font and different color.
These formatting differences help test robustness.
